

# MEASURING GUIDE

A perfect fit starts and ends with perfect measurements. Around 55% of our clients provide their own using our step-by-step guide – and in all but the tiniest fraction of cases (less than 1%), the boots fit just as beautifully as if we'd measured them ourselves.

The measuring process isn't difficult – just a little fiddly and time-consuming. It's essential to read the instructions carefully first, then follow each illustration precisely.

When we receive your measurements, we don't just glance over them – we scrutinise them. We'll check and triple-check any areas of concern and often ask for confirmation or retakes. In some cases, we may even request a Zoom call to observe specific measurements, or to supervise the full process. If we're supervising the full measurement session, it's helpful to see your initial set in advance of the call.

## DO NOT MEASURE YOURSELF HOWEVER TEMPTED

Stand up straight with equal weight on both legs - it's essential for accurate measurements.

## MEASURE ONE LEG AT A TIME

To avoid mistakes, don't try to measure both legs at the same time - take one at a time.

## STRICT MEASURING ORDER

Measure strictly in this order: 1, 2, 3, 4, 5, 6, 7, then 12 and finish with 8. This ensures everything lines up correctly.

## LABELS AND A TAPE MEASURE

Use sticky labels or tape to mark each point - this ensures you're measuring accurately, not guessing where you measured. Do you not be tempted to use anything other than a fabric tape measure with cm.

## LABEL PLACEMENT

Place the sticky labels for 9, 10, and 11 in the same position on both legs for consistency. If you feel a different spot is better for number 7, take two sets of measurements for comparison.

## USING THE TAPE MEASURE

Always start from zero and measure from the ground up for measurements 9-12.

The tape should be taut - never tight or loose.

## WHAT TO WEAR WHILST MEASURING GUIDE

**Tight fit** - wear breeches and ankle socks

**Classic, snug fit** - wear breeches and tall socks

**Relaxed fit** - wear breeches and thick socks

Never wear shoes when measuring. If you use orthotics stand on them and include them in the foot measurements.

Follow the measuring guide carefully and don't add or subtract centimetres. If you'd like a slightly roomier fit, wear thicker breeches or extra socks while measuring - your measurements will naturally be larger, but still accurate and consistent.

## WHERE TO MEASURE

Measure on a hard floor - never on carpet.

## ONLY CENTIMETRES!

For complete accuracy, take all measurements in centimetres - please don't be tempted to convert from inches, as it often leads to errors.

## ALL MEASUREMENTS FROM STANDING

No twisting around to supervise!

## DOUBLE CHECK EVERYTHING

Check and check again.

## 1 THE LENGTH OF YOUR FOOT

Measure from heel to longest toe using a ruler or tape pulled tight (the only time it needs to be tight) - accuracy to the millimetre matters.

Also include your regular shoe size and EU size, but only you know your EU size (not from a comparison chart).

## 2 THE FRONT OF YOUR FOOT

This measurement goes just beneath the toes – across the widest part of the foot.

Include any lumps or bumps and measure all the way around (not just over the top).

### 3 HEEL ARCH

Take Place the tape snugly under the heel arch and take the measurement over the top.

Don't pull it too far back toward the ankle – stop about a thumb's width before your ankle starts to ensure accuracy.

### 4 HEEL TO HEEL ARCH

Place the tape under the heel, as far back as it will go, and measure over the highest point of the heel arch – the spot where you'd typically do up your laces.

### 5 ANKLE

Place a sticky label just above the ankle bone – this should be the narrowest part of your ankle.

If your breeches sit under the tape here (and that's how you'd normally wear them), include them in the measurement.

### 6 LOWER CALF

Find the bottom of your calf and measure at the widest point just above the ankle – take this in the same place on both legs.

**Also take an additional measurement at 20cm up from the ground on each leg.**

### 7 CALF

Make sure you measure both calves at the same height from the ground. If you use different heights, please also provide a second set where the measurements are taken at the same height for accurate comparison.

Make sure you're not twisting around to supervise – stay still and upright to avoid distorting the measurements.

### 8 KNEE

Make sure you've taken measurement 12 first so you know exactly where your boots will end.

Then, using the top of your socks (or label) as your chosen boot height, wrap the tape around your leg at that point – never across the knee.

### 9 CROSS CHECKING

Measure from the ground up to the label for the ankle, measurement 5.

### 10 CROSS CHECKING

Measure from the ground up to the label for the lower calf, measurement 6.

### 11 CROSS CHECKING

Measure from the ground up to the label for the calf, measurement 7.

Ensure at least one set of measurements includes the same point measured on both calves for accurate comparison.

### 12 FINISHED HEIGHT OF YOUR BOOTS

Put on a pair of tall socks and pull them up to where you'd like your boots to end - imagine the socks are your boots. Look sideways in a mirror, bend into riding position, and check that the socks lie flat behind the knee without scrunching. The sock should never cross over the front of the knee. Once you're happy with the height, measure from the floor at the back of your leg to the top of the sock, as shown in our guide.

As a cross-check, compare with the height of an existing pair of boots - but measure only the leather up the back seam, not including the heel.

Do not add any centimetres - we need the height exactly as shown and requested in the guide.
